

[variajusticia] Editor Decision

2021-12-20 09:17 PM

Dear Suparji Achmad:

Greetings from Varia Justicia

This is to inform you that Editorial Office of Varia Justicia reached a decision regarding your submission to Varia Justicia, "The Legal Aspects In Management Special Economic Zones".

Our decision is: Revisions Required

You are expected to revise your manuscript as per the following suggestions. Read all part of the email carefully and act without fail. Editor Comment - As per new Varia Justicia Policy, References must be arranged as per Chicago Manual of Style edition 17th (fullnote) guidelines. **Reviewer A comments:** Kindly follow the reviewer's suggestion in the document attached. **Reviewer B comments; Note on Plagiarism and Similarity:** Varia Justicia follows ZERO Plagiarism policy. We check all articles by iThenticate (Turnitin software). You are expected to see attached similarity report as well and take the following actions:

1. Wherever you see the similarity, full paragraph or 2 to 3 lines full copy-pasted, you need to rewrite in your words. It will reduce similarity.
2. If you are taking any text, information, idea, images, data, table, etc. from some source then you should do paraphrasing and you have to give citations to that source. Otherwise, the article will be labeled as Plagiarized and Rejected and no query will be entertained.
3. If your Similarity index is above 30%. You need to send a new Turnitin report from your side showing a similarity of less than 30%.

In case you have any query on this plagiarism issue contact our expert on What's App on +62 81542 1717 06. **Note:** Kindly do all revisions in an attached file only, don't change file name or extension and send me back within 3 days. If you are not following the above suggestions, either your article will be rejected or delayed. Best Regard Chrisna Bagus Edhita Praja
Managing Editor

Suparji Achmad:

We have reached a decision regarding your submission to Varia Justicia, "The Legal Aspects In

Management Special Economic Zones".

Our decision is to: **Accept Submission**

Before we publish your article, kindly follow the instructions:

1. Find the Article Processing Charges (APC) attachment in the next email.
2. Kindly make a payment to **Bank Syariah Indonesia (BSI ex-BSM) account 7141830311** on behalf of Varia Justicia
3. Upload payment proof with subject **Payment Proof_Article ID** to variajusticia@ummgl.ac.id

After you upload the payment proof, your article will be published within 3 (three) days

Thank you for your attention

Regards

Chrisna Bagus Edhita Praja
Managing Editor of Varia Justicia

Special
Economic
Zones

The purpose of this paper is to find the legal aspects analyze the potential of special economic zones in national economic development, to realize people's welfare, and increase competitiveness, for the national interest, in addition to economic development of special economic zones in carrying out special government functions and for the national interest. Law as a function of developmental change also frames the reality of economic development. The formulation of the problem in this research What are the legal aspects in the management of special economic zones? This study was conducted through research method used in writing is the normative juridical method - normative juridical research is research that refers to legal norms contained in legislation, international conventions and court decisions. In addition, this study using and comparative approach juridical qualitative - the approach used in This research is a comparative approach, which is to compare the background and function of the regulation on special economic zones (SEZ) in several countries in developing special economic zones. This study shows that the The goal success of the implementation of a free trade area is strongly influenced by the existence of a law that can balance the protection of national interests and attract investment. This is very important considering that there is a view that various legal products are too beneficial for foreign parties and detrimental to domestic interests, there is a relationship between the legal system and the economic system of a country that influences each other in the development of Special Economic Zones.

1. INTRODUCTION

The purpose of the establishment of the Republic of Indonesia is in the context of realizing the general welfare (welfare, ~~state~~) and social justice.¹ To realize this goal, the national economy must be organized based on economic democracy with the principles of togetherness, efficiency and justice by maintaining a balance of progress and national economic unity. This objective shows that Indonesia is oriented towards the economy in the implementation of the life of the nation and state. The substance of the theory of the economic approach in law can be described as follows: Law and economics can be defined as the application of economic theory (primarily micro economics and their basic concept of welfare economics) to examine the formation structure, processes, and economic impact of law and legal institutions.²

Nyhart, Adi Sulistiyono in Krismiaji stated that there are six concepts in law that have an influence on the development of economic life, namely:³

1. Predictability – being able to predict the enactment of the law - providing a definite picture - in the future regarding the situation or relationships that are carried out in the present;
2. Procedural ability, the material law can realize itself properly (effectively);
3. Codification of objectives, legislation made in accordance with the codification of objectives in the economic sector and in accordance with the purposes desired by the state (regulator);
4. Balancing factor - providing a balance between conflicting values in society;
5. Accommodation - must be agile - quick responsive with successfullness - Changes that are very fast will essentially cause a loss of balance, this restoration is possible because in this turmoil the legal system provides a grip of certainty through clear and definitive formulations, opens opportunity for the restoration of justice through orderly procedures and so on.

According to the concept of the welfare state, the state is seen as a tool to achieve the goals of prosperity and social justice for all people.⁴ Countries that adhere to the concept of a welfare state have 4 (four) functions, namely: ~~the state as provider (the state as a servant)~~, the state as regulator, the state as entrepreneur, and the state as referee. ~~Through this article, the author examines the legal aspects in the management of special economic zones.~~

¹ The 1945 Constitution of the Republic of Indonesia. Article 33 The concept of the welfare state in the 1945 Constitution was first conveyed by Muhammad Hatta, and it was stated in Article 33 which reads: (1) The economy is structured as a joint effort based on the principle of kinship; (2) Production branches which are important to the state and which affect the livelihood of the people are controlled by the state; (3) The earth and water and the natural resources contained therein shall be controlled by the state and used for the greatest prosperity of the people; (4) togetherness, efficiency, justice, sustainability, environmental insight, independence, and by maintaining a balance of progress and national economic unity. (5) Further provisions regarding the implementation of this Article shall be regulated in the Law.

~~The arrangement of the economic system~~ According to Lane, Jan-Erik & Svante Ersson, Francis Fukuyama in Ningrum Natasya Sirait the economic system, ~~said that the system~~ includes 4 things, namely:⁵

- a. Organizing economic decisions (centralized or decentralized in nature),
- b. Provision of information and coordination for the community (free market or regulated in planning),
- c. Ownership of the factors of production (private, cooperative or collective),
- d. Stimulus system (moral or material).

Mochtar Kusumaatmadja and Arief B. Sidharta In Budiman Ginting said-argued that legal certainty is the real goal of law in addition to benefit and justice for all citizens with all their various features, ~~—~~ which are plural in their interactions. Legal certainty is inseparable from the function of law, ~~—~~ the achievement of order in human life in society. This regularity causes people to live with certainty, meaning that people can carry out the activities needed in social life. Legal certainty is a guarantee and certainty of doing business ~~in the business world~~ activities. Moreover, Legal-legal certainty is the consistency of regulations and law enforcement in Indonesia, harmonization and consistency in all regulations and intertwined with other regulations. ~~The consistency of regulations is indicated by the existence of regulations that do not conflict with each other, and can be used as guidelines for a sufficient period of time, so that it does not seem that every change of official is always followed by a change of regulations that can conflict with each other.~~⁶

In contrast to neo-liberalism, which prioritizes synergy between stakeholders, the community, the business world, and the government. Julie Paquin said that a legal institution is needed to ensure that the goals of growth and poverty reduction in developing countries are achieved, as follows:⁷ neo-liberal prescriptions to generate growth in the developing world, concepts like poverty reduction, good governance, and ~~rights-based~~ rights-based development emerged as new mantras. One of the most striking phenomena in the development field has been the resurgence of interest in legal institutions.

An economic system that is in line with Pancasila and a people's economy which is considered the right economic pillar to be applied in Indonesia will be achieved by providing equal business opportunities for every business actor, both large and small, which is nothing but the essence of the current market economy. After the 1998's economic crisis occurred, ~~it was realized that many factors influenced the occurrence of the Indonesian economic crisis in 1998,~~ one of which was the culture of competition. Competition is a culture that is considered incompatible with the culture of the people in Indonesia. It is not easy to change behavior after doing it for more than for about 30 thirty years under the New Order regime. It turns out that every economic system implemented is not accompanied by a clear competition policy. ~~In this case the policy in question is more than just a regulation or law because it establishes a pattern that is expected to provide the basis for the form of its implementing regulations, namely laws.~~

The standard law and economics view of litigation behavior proceeds from the assumption that plaintiffs will sue whenever the expected value of doing so exceeds expected cost. Tethered to the profit motive, private enforcement will thus operate in a kind of market-clearing, “auto-pilot” mode. Assumptions about the essential profit motivation of private enforcers offer a useful starting point for thinking about the behavior of private litigation regimes by highlighting some of private enforcement’s benefits and costs compared to regulatory alternatives. For instance, private enforcement’s champions assert that the profit-motivated nature of private enforcement renders it more cost-effective and nimbler than poorly incentivized or sclerotic public enforcement bureaucracies. A further claim is that profit-seeking private enforcers will provide a politically insulated, “failsafe” source of enforcement if public enforcement agencies, such as the Securities and Exchange Commission or the Federal Trade Commission, suffer from lassitude, resource constraints, or “capture” by regulated interests.⁸

Legal changes can be divided into two broad categories according to their causes. The first type of legal change is caused by the law responding to changes taking place in society. Political, social and economic changes, technological advancements and changing moral beliefs all lead eventually to changes in the law. Indeed, the law must be responsive to new circumstances and attitudes if it is to enjoy continued respect. The second type of legal change arises from the need to keep the law in good working order. Like any piece of sophisticated machinery, the law machine must be kept in a neat and tidy condition, maintained on a regular basis, with essential repairs undertaken when necessary. We will now examine these two types of legal change in more detail.⁹

Comment [MOU9]: This paragraph indicated doesn't in line with the topic of discussion. Kindly recheck for the availability of this paragraph

Formatted: English (U.S.)

The emergence of economic offenses is a consequence of the increasing involvement of the government in carrying out efforts in the field of people's welfare. So that to overcome the conflict of interest between the parties involved, it is necessary to have an order that is in charge of maintaining security and order in all areas of public life, including security and order in the economic field. The legal instrument is economic criminal law whose application must be applied secondarily, meaning that it is only given a function after other legal means are proven incompetent or inadequate.¹⁰

National Economic Development aims to create a just and prosperous society based on Pancasila and the 1945 Constitution of the Republic of Indonesia and the mandate of the Decree of the People's Consultative Assembly of the Republic of Indonesia Number XVI/MPR/1998 concerning Economic Politics in the context of economic democracy with the principles of togetherness, efficiency with justice, sustainable, environmentally sound, independent, and by maintaining a balance of progress and national economic unity as well as the existence of political and economic alignments that provide more opportunities and support for micro, small, medium enterprises (MSMEs), and cooperatives and at the same time provide benefits to domestic industry. In this regard, the Special Economic Zone (SEZ) provides a location for MSMEs and cooperatives in order to encourage upstream and downstream linkages and synergies with large companies, both as business actors and as supporters of other

SEZ is an area with certain boundaries within the jurisdiction of the Republic of Indonesia which is determined to carry out functions with certain economic benefits. The main objectives of SEZ development are to create economic growth, equitable development, and increase the nation's competitiveness. SEZs are developed through the preparation of areas that have geoeconomic and geostrategic advantages and function to accommodate industrial activities, exports, imports, and other economic activities that have high economic value and international competitiveness. The presence of SEZs is expected to build economic capability and competitiveness at the national level through value-added industries and tourism and value chains. Until 2021 there are New Absorbed Workforce 8,686 People with 19 SEZs in Indonesia with the

6. KEK Lido
7. SEZ Gresik

~~Through this article, the author examines the legal aspects in the management of special economic zones. The Problem Question about this article how is the legal aspects in the management of special economic zones?~~

2. RESEARCH METHODS

The research method used in writing this dissertation is a normative juridical and comparative juridical method which is qualitative. Normative juridical research is research that refers to legal norms contained in laws and regulations, international conventions and court decisions.¹⁴

The approach used in this study is a comparative approach,¹⁵ which is to compare the background and function of the regulation on special economic zones (SEZ) in several countries in developing special economic zones. The comparative law approach is carried out in order to obtain attitudes and policies that have developed in several countries. In conducting a comparison of the legal system, we review from three aspects, namely the legal substance (substance), structure (structure) and legal culture (culture).¹⁶

3. RESULTS AND DISCUSSION

3.1 Legal Basis for Special Economic Zones

Law No. 25 of 2007 concerning Investment was promulgated on April 26, 2007 and in one of the chapters regulated in Chapter XIV, namely concerning Special Economic Zones (SEZ) as regulated in Article 31. The development of a special economic zone has to do with activities investment in general, this can be seen from the objectives of SEZ development, namely: increasing investment, employment, foreign exchange earnings as a result of increasing exports, increasing the competitive advantage of export products, increasing the use of local resources, services and capital for increasing exports and encouraging an increase in the quality of human resources through technology transfer.²⁰

Formatted: English (U.S.)

Formatted: English (U.S.)

As a continuation of these provisions, Law Number 39 of 2009 concerning Special Economic Zones was issued. The purpose of developing SEZs is, among others: to provide opportunities for increased investment through the preparation of areas that have advantages and are ready to accommodate industrial activities, export-import and economic activities that have high economic value, increase foreign exchange earnings for the country through international trade; and increasing employment, tourism and investment opportunities.

The process of economic development, including the development of the SEZ, brings consequences for changes and legal reforms. The implementation of SEZ requires conducive ~~if law regulations~~ and legal institutions. Legal certainty is an element that is as important as political stability and economic opportunity. Strengthening legal institutions is a precondition for economic change, crucial to the viability of new political systems, and an agent of social change.

Formatted: English (U.S.)

Formatted: English (U.S.)

Laws that are considered pro-foreign include Law No. 30 of 2007 on Energy and Law No. 25 of 2007 on Investment. On the other hand, the government is also considered to have allowed foreign domination in three strategic areas, namely energy, banking, and telecommunications, to exceed 50 percent. It seems that foreign domination of economic sectors in Indonesia is expanding and spreading. Foreign domination can cover various sectors, namely finance, energy, mineral resources, telecommunications, and plantations.

Formatted: Indent: First line: 1.27 cm

In addition, Law no. 25 of 2007 concerning Investment (UUPM) is considered as the basis for the complete surrender of Indonesia's natural wealth to foreign investment. ~~The birth~~ Designing of the Capital Market Law has sparked controversy and

¹⁹ Kenneth D. Bailey, *Methods of Social Research* (New York: The Pree Press, 1987). P. 62

²⁰ Menurut model pengembangan perekonomian suatu kawasan, maka SEZ/KEK terbagi atas : a) FTZ, b) Bonded Zone, c) Export Processing Zone dan d) Kawasan Industri Terpadu. Dalam UU KEK disebutkan bahwa KEK dapat dibentuk terdiri dari satu atau kombinasi dari : a) Kawasan Pengolahan Eksport; b) Tempat Penimbunan Berikat; c) Kawasan Industri; d) Kawasan Pengembangan Teknologi; e) Kawasan Jasa Keuangan; f) Kawasan Ekonomi lainnya.

reactions from many parties, both from the [House of Representatives \(DPR\)](#) and [civil the society](#), due to the [very-liberal](#) nature of the law and pro-foreign capital. Through a judicial review mechanism, the Constitutional Court (MK) annulled one of the articles on land tenure rights because it was deemed to have violated the 1945 Constitution.²¹

Foreign domination in the national economy needs to be trimmed so that natural wealth can be enjoyed by the people. Foreign corporations have controlled [80-eighty](#) percent of the mining sector and left environmental damage in some places. The government must demand renegotiation of all cooperation contracts with foreign corporations that cultivate Indonesia's natural wealth.²² The continuous exploitation of natural resources by foreign corporations is detrimental to Indonesia, because Indonesia only gets taxes and royalties.²³

3.2 SEZ Regulation in the Job Creation Law (Omnibus Law)

The juridical basis of the rules for implementing Special Economic Zones, namely that in order to implement the provisions of Article 150 and Article 185 letter b of Law Number 11 Year [2020](#) concerning Job Creation, it is necessary to stipulate a Government Regulation concerning the Implementation of Special Economic Zones; 1. Article 5 paragraph (2) of the 1945 Constitution of the Republic of Indonesia; Law Number 39 of 2009 concerning Special Economic Zones (State Gazette of the Republic of Indonesia of 2009 Number 147, Supplement to the State Gazette of the Republic of Indonesia Number 5066); Law Number 11 of 2020 concerning Copyright Number 245, Supplement to the State Gazette of the Republic of Indonesia (State Gazette of the Republic of Indonesia of 2020 Indonesia Number 6573). In Article 1 Paragraph 1 it is stated that Special Economic Zones, hereinafter referred to as KEK, are areas with certain boundaries within the jurisdiction of the Unitary State of the Republic of Indonesia which are determined to carry out economic functions and obtain certain facilities whose implementation is regulated through the KEK Administrator who has the task of administering business permits, other permits, services, and supervision in SEZs. Article 2 Paragraph (1) states that the implementation of SEZ includes:²⁴

- a. Location, criteria, and business activities;
- b. Proposal for the establishment of SEZ;
- c. Determination of SEZ;
- d. Development and operation of SEZs;
- e. SEZ institutional;
- f. SEZ management; and
- g. The facilities and amenities include the following:

²¹ “Undang-Undang Republik Indonesia Nomor 25 Tahun 2007 Tentang Penanaman Modal (Lembaran Negara RI Tahun 2007 Nomor 67, Tambahan Lembaran Negara RI Nomor 4724),” Pub. L. No. Lembaran Negara RI Tahun 2007 Nomor 67, Tambahan Lembaran Negara RI Nomor 4724) (2007). Paragraph 22

- k. SEZ development and management;
- l. Provision of SEZ infrastructure; and/or
- m. Another economy.

Whereas in Paragraph (2) it is stated that other economic activities as referred to in paragraph (1) letter m shall be determined by the National Council. Paragraph (3) In determining other economic activities as referred to in paragraph (2), the National Council may ask for consideration from the minister or the head of the relevant institution. Paragraph (4) the implementation of business activities as referred to in paragraph (1) is regulated in accordance with the SEZ zoning plan. Paragraph (5) In the SEZ, locations are provided for micro, small, medium-sized enterprises, and cooperatives, both as business actors and as supporters of the activities of companies within the SEZ. Paragraph (6) In SEZ, supporting facilities and housing for workers can be built which are separated from the location of business activities. This government regulation also regulates the submission of special economic zones proposed by the regional government.²⁵

Tulus Tambunan and Coenrad Muller Scheepers in Victoria Natali Makalew, Vecky A.J. Masinambouw, Een N. Walewangko said that the existence of the Special Economic Area is the growth of supporting areas that will accelerate and increase the absorption of labor, local, regional, national and international investment flows to the region, which in turn will improve the welfare of the community in general. With the development plan for Special Economic Zones, it is hoped that the community will be able to take advantage of the policy to increase economic level and increase technology transfer, innovation and increase national productivity and structural transformation, as well as become an arena for promoting trade and investment.²⁶

Formatted: English (U.S.)

Special Economic Zones require the availability of facilities and infrastructure as well as skilled workers, for this reason, it is the task of the Ministry of Manpower which is included in one of the priorities of the national program to create harmonious Industrial Relations and Competent Industrial Human Resources (HR) to prepare skilled workers. in accordance with the needs of the industry - as stated in Article 10 of Law Number 25 of 2007 concerning Investment states that (1) Investment companies in meeting the needs of workers must prioritize Indonesian citizens. (2) Investment companies have the right to use foreign national experts for certain positions and expertise in accordance with the provisions of laws and regulations. (3) Investment companies are required to improve the competence of Indonesian citizens through job training in accordance with the provisions of laws and regulations. To meet the needs of manpower in accordance with the needs of industry, cooperation between various parties is needed, including the Provision of Skilled Personnel and Professional Management Institutions that can support the establishment of SEZs in an area, including the construction/development of Job Training Centers (BLK), Construction/Improvement of Schools Special Intermediate (SMK) and Capacity Building for KEK Administrators.²⁷

3.3 The Role of Law in Special Economic Zones

In order to integrate the needs of investment and economic nationalism in Indonesia in the implementation of special economic zones, it is necessary to strengthen the Indonesian legal system.²⁸ Referring to Lawrence M. Friedman's theory, every legal system always contains three elements, namely structure, substance and legal culture.²⁹ First structure.

“First many features of a working legal system can be called structural the moving parts, so speak of the machine Courts are simple and obvious example; their structures can be described; a panel of such and such size, sitting at such and such a time, which this or that limitation on jurisdiction. The shape size, and power of legislature is another element structure. A written constitution is still another important feature in structural landscape of law. It is, or attempts to be, the expression or blueprint of basic features of the country's legal processes, the organization and framework of government.”

²⁶ Victoria Natali Makalew, Vecky A . J. Masinambouw, “Analisa Kontribusi Kawasan Ekonomi Khusus (KEK) Terhadap Struktur Perekonomian Sulawesi Utara.”

²⁷ Victoria Natali Makalew, Vecky A . J. Masinambouw.

²⁸ Peter de Cruz, *Perbandingan Sistem Hukum: Common Law, Civil Law, dan Socialist Law*, (Jakarta: Nusa Media, 2010), hlm.68.

²⁹ Lawrence M. Friedman and Grant M. Hayden, *American Law: An Introduction, American Law: An Introduction* (New York: New York W. W. Norton & Co, 1984). P. 7

Friedman's description above shows that the structure as part of the legal system includes the institutions created by the legal system including the judiciary (court) legislative and executive. The legal structure component is a representation of the institutional aspect that plays the role of law enforcement and law making. The structure in its implementation is a uniformity related to one another in a legal system. **Second, substance;**

"The second type of component can be called substantive. These are the actual products of the legal system-what the judges, for example, actually say and do. Substance includes, naturally, enough, those propositions referred to as legal rules; realistically, it also includes rules which are not written down, those regulations of behavior that could be reduced to general statement. Every decision, too, is a substantive product of the legal system, as is every doctrine announced in court, or enacted by legislature, or adopted by agency of government."

Friedman's description above shows that the legal substance includes the results of the structure which include laws and regulations, decisions and doctrines. Legal substance as an aspect of the legal system is a reflection of the applicable rules, norms and behavior of the people in the system. **Third, legal culture**

"Legal culture can be defined as those attitudes and values that are related to law and the legal system, together with those attitudes and values affecting behavior related to law and its institution, either positively or negatively. Love of litigation, or a hatred of it, is part of the legal culture, as would be attitudes toward child rearing in so far as these attitudes affect behavior which is at least nominally governed by Law. The legal culture, then is a general expression for the way the legal system fits into the culture of the general society."

Friedman's description above shows that legal culture includes views, attitudes or values that determine the operation of the legal system. People's views and attitudes towards are very varied, because they are influenced by sub-cultures such as ethnicity, gender, education, descent, belief (religion) and environment. The views and attitudes of these people greatly affect the rule of law. ³⁰ Thoughts on economic development are

³⁰ W. Friedmann, *The State And The Rule of Law in a Mixed Economy* (London: Stevens & Son, 1971). See Geelhoed, *De Intervierende Staat (Aazet een Instrumentenleer)* Staaaitgeverij S'Gravehega, 1983. In Gunarto Suhadi, *Peranan Hukum : Dalam Pembangunan Ekonomi* (Yogyakarta: Univ. Atma Jaya, 2002). P. 8. There are three typologies of the role of the state in the name of law in encouraging economic development, namely; First, the state acts as a regulator (stuurende) and jury (referee) by using general and individual (special) administrative law instruments. Government actions include providing information, and making decisions with the aim of influencing citizens in general, for example issuing regulations on investment, rental rates, monetary policy, banking, capital markets and government control through various macroeconomic regulations and the establishment of other selective norms as well as those included in the category of coercive action in a decision on the dispute of the parties; Second, the state can act as a provider of various needs of its citizens through the provision of social benefits and other actions that lead to social rechtstaat. The role of the state as a provider is an embodiment of the main task of the state in the social welfare state system; Third, the role of the state as an entrepreneur or entrepreneur is carried out through the establishment of state-owned enterprises to carry out the function as an agent of development. This task as an agent of development can be carried out primarily as a driving force for the country's growth in general, advancing certain economic sectors that cannot receive private attention and carrying out vital efforts.

found in the work of Adam Smith in *The Wealth of Nation* and the work of Abbe de Condillac in *Government and Commerce*.

According to Baghwaty, Adam Smith's work has inspired a number of trade theorists, including the models developed by David Ricardo. Adam Smith's thinking describes how one factor of production works in the production process of two goods assuming a constant level of labor productivity from two countries that have relative productivity levels, and the two countries involved in trade are assumed to benefit from the trade. The sustainability of trade is determined by profits, where the law of the free market applies, namely the price (the balance between supply and demand) determines the allocation of resources. The market mechanism has a weakness - when a market failure (distortion) occurs, free trade is not the best policy - on the contrary, the policy can be harmful rather than beneficial, such as a monopoly and protection through the imposition of import tariffs. Developing countries often impose large import tariffs within the framework of infant industry policies, namely by protecting their emerging industries as part of a substitution import strategy (i.e., a strategy to produce imported goods for domestic needs then develop them for export needs). The goal is to create a monopolistic domestic industrial power, so that the economies of scale of the industry can be achieved more quickly and are able to compete with industries from developed countries. As a result, the allocation of production sources cannot run according to the law of the market (the invisible hand), but is determined by government policy. Trade between countries occurs when each country develops different products so that it creates demand and supply between countries on the basis of differences in the goods they produce. Trade between countries does not only occur because of product differences (comparative advantage), but also develops when there is a difference in product efficiency (competitive advantage). Differences in products and differences in efficiency are the drivers of trade between countries. The development process brings consequences for the process of change and legal reform.³¹

Development is basically a change towards a better life.³² Furthermore, according to Max Weber, the role of law in development is a coercive order that has potential support from state power.³³ The development of a formal rational legal system as a reflection and prerequisite for the growth of modern capitalism, furthermore, the role of law in change according to Ruscou Pound is as a tool to make social change (social engineering). Meanwhile, J. Bentham argues that to carry out the function of social engineering, the law can be used to make changes in society.

The phenomenon of mutually influencing the relationship between the legal system and the economic system of a country is described in Talcot Parsons and further development by Harry C. Bredemeir which states the concept of input-output.³⁴ Laws obtain inputs and produce results for other sub-systems. Each sub-system has its own function: First, the economic sub-system has an adaptation function, which is a function of how the community can utilize the resources around it optimally. The focus

of economic problems is to formulate rational behavior in dealing with needs, while law formulates various rational policies in overcoming the situation.³⁵

Second, the political sub-system functions as the achievement of goals (goal pursuance), namely that every member of the community always has a need to know which direction the community's goals are to be moved. With politics, society is brought together as a totality to determine a common goal; third, the social sub-system functions as integration and fourth, the cultural sub-system functions to maintain patterns (pattern maintenance).³⁶ In other words, law is basically a crystallization or formalization of economic will and political will that interact and compete with each other. On the other hand, according to Adam Smith, economics and politics basically have different goals, namely on the one hand creating a source of income for the community so that self-sufficiency is achieved and on the other hand providing various facilities for the government so that it can carry out its duties and functions.³⁷

According to Burg's, there are three elements that must be developed in the legal system in order to play a role in economic development, namely stability, predictability and fairness.³⁸ This is in accordance with the opinion of J.D.Ny.Hart, as follows:³⁹

First, stability, the role of the state which is authorized by law is basically in order to maintain a balance to achieve a goal. This balance includes the interests of individuals, groups and public interests that are related to the challenges being faced both at home and abroad. Through other laws and policies, it is hoped that a balance between demand and supply will be achieved, a balance between the overall national production and the overall needs of the community. Second, predictability that is for the law to be effective, it must be predictable and provide legal guarantees and certainty in providing future development projections. With predictions,⁴⁰ humans or society have guidelines for actions that will be carried out in relation to other humans and have certainty how other parties will act. In addition, the law must have procedural capabilities in dispute resolution. These procedures are related to the circumstances when a dispute occurs and the mechanism or procedure for resolving disputes in courts or other dispute resolution forums such as arbitration or conciliation. Theoretically, dispute resolution procedures must be structured effectively and efficiently. Third, fairness (fairness) Law is a means to facilitate the process of resolving disputes that occur with the aim of creating justice for the community and preventing unfair and discriminatory practices. The law must be able to accommodate a clear balance, definition and status for the interests of individuals or groups in society.

Special economic zones are regulated by Law Number 39 of 2009 concerning Special Economic Zones, which means that the sociological basis is to accelerate strategic economic development in certain areas in order to maintain a balance between the progress of an area within the national economic unit and maintain balance —not to

disturb the environment and protected forests. For this reason, the government issued an implementing regulation from the SEZ regulation, which as stated in Article 3 that in the SEZ can be built supporting facilities and housing for workers and in each SEZ provided locations for micro, small, medium enterprises (MSMEs), and cooperatives, both as a Business Actor or as a supporter of company activities that are within the SEZ and are located in a position close to international trade routes or close to international shipping lanes in Indonesia or located in areas of superior resource potential and have clear boundaries.⁴¹

In the implementing regulations of SEZ, namely Government Regulation number 2 of 2011 concerning the Implementation of Special Economic Zones in Article 3, it is stated that special economic zones that carry out economic functions within areas with certain boundaries within the jurisdiction of the Unitary State of the Republic of Indonesia in certain zone groups include the following:⁴²

1. Export processing zone - where the production is intended for export;
2. Logistics activity zone - storage, assembly, sorting, packing, distribution, repair and reconditioning of machinery activities from within the country and from abroad.
3. Industrial zone - which processes raw materials, raw materials, semi-finished goods, and/or finished goods, as well as agro-industry with a higher value for their use, including industrial design and engineering activities whose production is for export and/or for domestic use;
4. Technology development zone for research and technology activities, design and engineering, applied technology, software development, and services in the field of information technology;
5. Tourism Zone, tourism business activities to support the implementation of entertainment and recreation, meetings, exhibitions, and related activities.
6. Energy Zone research and development activities in the energy sector and the production of alternative energy, renewable energy, and primary energy.
7. Other Economic Zones – determined through the National Council

In addition, the government issued Government Regulation Number 96 of 2015⁴³ which was updated with Government Regulation Number 12 of 2020⁴⁴ concerning Ease of SEZ Facilities with the aim of increasing investment and accelerating business implementation in Special Economic Zones that can support national economic development and economic development in certain areas to increase employment. Business actors in SEZs include Business Entities and/or Business Actors who carry out activities in the business sector in SEZs, according to Government Regulation Number 12 of 2020 concerning Ease of SEZ Facilities where facilities and

In Indonesia, the role of law in carrying out economic development can be seen since 1969, when the initial planned development was carried out in stages and each stage took 5 years. The First 25 Years of Long-Term Development (PJPI 1969-1994) carried out in five years (Pelita). Each Pelita is compiled in the GBHN and stipulated by an MPR Decree. In that regard, the relationship between the legal system and the economic system of a country is mutually influencing.⁴⁶

Formatted: English (U.S.)

4. CONCLUSION

The purpose of the Special Economic Zones is to improve the economy through foreign investment that can provide incentives and facilities for business actors which so far have not been maximally accommodated in Law Number 25 of 2007 concerning Investment promulgated on April 26, 2007 and in one of the chapters that regulated in Chapter XIV, namely concerning Special Economic Zones (SEZ) as regulated in Article 31. Development of special economic zones must be carried out with investment activities in general, this can be seen from the objectives of SEZ development, namely: increasing investment, employment, obtaining foreign exchange as a result of increasing exports, increasing the competitive advantage of export products, increasing the use of local resources, services and capital to increase exports and encouraging the improvement of the quality of human resources through technology transfer.

Special Economic Zones require the availability of facilities and infrastructure as well as skilled workers, for this reason, it is the task of the Ministry of Manpower which is included in one of the priorities of the national program to create harmonious Industrial Relations and Competent Industrial Human Resources (HR) - to prepare skilled workers in accordance with the needs of the industry, With the regulations related to this SEZ, the role of the government as a mediator or regulator of economic acceleration and facilitating the absorption of labor and its welfare, so that the existence of the SEZ can be felt by the community, especially in regional areas.
